Subject Index 1986

Afghanistan: military coup 1978 438–439; military operations 1979–1980 440–441; occupation and resistance 441–444; protracted conflict 437–446; recent history 437–438; role of Pakistan 444–445; search for political solution 445–446; Soviet version of events 439–440; Western version of events 440.

Africa: apartheid 453; armed conflict 450–451; conflict in Southern Africa 453, 455–459; foreign intervention 451–452; militarization 447; military capabilities 449–450; military expenditure 447–449; military government 450; Organization of African Unity 453–454; regional conflicts 452–453; South Africa embargo 455–459.

Armaments, see also *arms race, nuclear weapons* and *Strategic Defense Initiative:* arms transfers 48–51, 247–260; current data 232–233; historical perspective 229; horizontal spread of weapon technology 268–270; impact on development 56–57; inadequacy of data 271–281; military expenditures 229–233; military R&D 235–241; newcomers in arms production 47–48, 51–54, 265–270 nuclear launchers 297, 300; nuclear warheads 125, 298–300; politics and arsenals 261; related debt 261–263; role in industrialization 54–55; shares of world military spending 231; sources of military expenditure data 271–274; 279; Soviet military expenditures 277–281; Soviet strategic weapon capability 486; spenders in military R&D 236; strategic doctrines 488; Third World arms production 47–58, 265–270; US strategic weapon capability 486; world output and military expenditure 232.

Arms control, see also *disarmament* and *peace research*: agreements 463–476; Antarctica 473; arms restraint 521; ASAT ban (verification) 165–173; attitude of China 305; ban on MARVs and cruise missiles 529–530; biological weapon convention 469–470; chemical weapon-free zone in Europe 509–510; chemical weapons 470, 497–500; demilitarization of political relations 220–222; diplomacy of strength 521–522; environment modification 470–471; Geneva negotiations 128–130; Geneva Protocol on chemical weapons 501–503; Geneva conventions on war victims 477–479; Hague conventions 477; humanita-laws of war 476–479; failure 44, 365, 523, 536; international satellite monitoring 519–520; interest groups 425; legalizing armaments 400; military R&D 527, 531–32, 536–537; negotiations 523; non-proliferation of nuclear weapons 19–27, 467–468, 491–496; nuclear weapon tests 463–465; offense and defence 522–523; outer space 471–472, 530–531; perspective 222; prevention of accidents at sea 476; prevention of nuclear accidents 475–476; prevention of nuclear war 476; prevention of war 475; public opinion 223, 541–546; restraining military technology 44–45, 527–533, 536–537; seabed 472–473; security assurance to non-nuclear states 412, 468–469; South-Pacific Nuclear-Free Zone 505–508, space weapons 165–168; START and INF negotiations 485–486; strategic arms limitation 465–467; Third NPT Review Conference 13–19; Tlatelolco Treaty 473–475; unilateral action 382, 402–404; verification 515–523; verification regime on chemical weapons 499–500.

Arms race, see also *armaments, nuclear weapons* and *Strategic Defense Initiative:* action-reaction 198, 207, 210; ASAT weapons 165–173, 334–335; ballistic missile defence 335–336; bargaining chip 211; competing explanations 197–198, 203–204; determinants 197; halting and reversing 43–45, 537–538; incompatibility with human rights 71–78; interaction patterns 199–203, 207; military fix 198, 209–211, NATO decisions 209–211; nonlinear model 90–92; nuclear superiority 487–488; reconnaissance satellites 331–334; role of China 305; role of military sector 218–220; role of military technology 41–43; 235–236; outer space 29–39, 331–339; Soviet role 387; space weapons 336–337; systemic 208; technological competition 223–224; technological enterpreneurship 200–201, 209, 211–212; theories 197–206; 208; transition to war 87–93; windows of opportunity 212.

Arms trade: control 254–256; exports and imports 247–251, 255, 257–260; inadequacy of data 274–275; intra-South transfers 48–50, 249–250; leading exporting countries 248, 252; related debt 261–263, major conventional weapons 247–263; shares in world economy 250; structural changes 251–254; Third World imports 248; US and Soviet exports 254.

Cambodia: background to conflict 60–62; between war and peace 59–70; China policy 62–66; deadlock 69; major contenders 59–60; Soviet attitudes 66–68; Vietnam war heritage 60–62.

Central America: armed forces 431–432; back-

ground to conflict 429–430; conflict resolution 434–436; Contadora peace initiative 434–436; foreign military presence 433–434; militarization of the Istmus 431–434; military expenditure 430–431.

Chemical weapons: chemical warfare 367–369; Geneva negotiations 497–500; horizontal proliferation 371–372; instruments of war-fighting 367; new technology 372–373; potential CW agents 369–370; US and Soviet stocks 371; verification problems 499–500.

Confidence-building measures: common interests 420; common security 407–408; deterrence 421–422; European context 511–514; functions 512–513; information and constraint measures 511–512; international relations 419; mutual reassurance 421–422; mutual threat perceptions 419; political and military requirements 513–514; transparency 532–533; trust in East West relations 419–422; unilateral action 532–533.

Conventional weapons: arms production 47–58; 265–276; conventional offensive 137–138; 147–148; deep strike 134–137; intra-South trade 48–50, 249–250, 253; nuclear no-first use 383–384; trade 247–260.

Defence: flexible response 131–132; mobile area defence 134–135; NATO consensus 132–133; no-first use of nuclear weapons 384; right of self-defence 384; staticarea defence 133–134.

De'tente: common security 405–407; constituency 400; demilitarization of international relations 423–425.

Deterrence: adequate 403–404; common security 389, 398; coherence and rationality 392–393; credibility 2, 388; enlightened 388; escalation dominance 2–3; idea of war 387; legitimation of nuclear weapons 388–390; mutual reassurance 421–422; nuclear option 390–391, 393; posture 127; risk of war 388; security policy 387–388; semantics 389; Soviet policy 144–146; stable balance doctrine 391–392; undermining sovereignty 393; use of nuclear weapons 388–389; war-fighting doctrines 122, 379, 387; war preparation 393–394; war prevention 389–390.

Disarmament, se also *arms control* and *peace:* abandonment of 393; abolition of war 526; para bellum 393; principles 525–526; stable balance 393; United Nations 525–526.

European security: agenda 423–425; alternative approaches 141–149; chemical weapon-free zone 509–510; commun security 404–405; confidence-building 511–514; European Community 177–178; European pillar 175; first-use policy 380–381; global confrontation 425; Franco-German cooperation 178–179; military strategy 180–183; military systems 1–3; NATO and WTO weapon build-up 1–2; nuclear disengagement 409–414; nuclear weapon policies 488–489; strategic debate 133–138; tension within NATO 3–7, 381–382; threats to 409; Western European options 7–11; Western European perspective 1–11; Western European security cooperation 175–183; Western European Union 175–177.

Human rights: economic, social and cultural rights 74–75; civil and political rights 75–76; incompability with arms race 71–78; international law of human rights 71–72; right to life 72–74.

Middle East: backdrop to crisis 114–115; crisis management 115–118; easing and escalating crises 113; war scenario 113–120.

Military strategy: alternative vision 126–127, 148; asymmetric force positions 489; command control and communication 315–319, 342–343; conventional offensive 137–138, 147–148; deep strike 134–137; deployment of nuclear force 379–380, 382–384; European scene 1–3, 180–182; first strike 123; flexible response 131–140, 378–379; limited nuclear war 380; mobile area defence 134–135; NATO consensus 132–133; no-first use of nuclear weapons 146–147, 377–385; nuclear war-fighting 2–3, 122–124, 380–381; Soviet military doctrine 142–144; static area defence 133–134; strategic computing 341–344; technological stimulant 42, 535; war prevention 138–139.

Military technology (military R&D) arms control measures 527–533, 536–537; artificial intelligence 341–342; ASAT weapons 334–335; civilian and military technology 159–161; competition 200, 201–209, 211–212, 535–536; conversion 451, 531–532, 536–537; destabilizing effects 490; domestic economies 192–193; emerging technologies 352–352; fuelling the arms race 41–46, 235–236, 535–536; high-tech 185–195; horizontal spread 268–270; largest spenders 236; maximizing weapon properties 308; military R&D 235–241, 527–538; nuclear testing 243–245; operational laws and pressures 42–43, 236–237, 535–536; percentage of government R&D 240; percentage of military expenditures 239; push power 41–43, 535–536; restraining measures 44–45, 527–533, 536–537; secrecy 162–163; Soviet expenditure 238; Soviet space research 337–338; space-based laser 151–158; specifics 160; spin-off 159–163; superpower supremacy 193–194; technological determinism 43–44; technological momentum 535; US expenditure 237–238; US SDI programmes 335–337.

Nuclear weapon-free zones: central, northern and souther Europe 409–410, disengage-

ment in Central Europe 412–413, 415–417; disengagement in northern and southern Europe 413–414; meaning 411; negative security assurances 412; non-deployment of nuclear weapons 410–411; Rarotonga and Tlatelolco 507–508; South-Pacific Nuclear Free Zone 505–508; Tlatelolco Treaty 473–475.

Nuclear weapon tests: comprehensive test ban 481–483, 527–528; discontinued negotiations 481–482; limitation agreements 463–465; nuclear explosions 1985 243; nuclear explosions 1945–1985 244–245; significance of a CTB 482; Soviet moratorium 481; third generation of nuclear weapons 309; verification 482–483.

Nuclear weapons, see also *deterrence* and *nuclear weapon tests:* British nuclear forces 295; China's nuclear policy 301–305; Chinese nuclear forces 296, 304; Damocles sword 41; effects 353–360; European dilemma 488–489; French nuclear forces 295; international law 377–378; national security 21–23; national stockpiles 285–288, 291–292; neutron bomb 311–314; no-first use 146–147, 377–385; non-proliferation 13–27, 491–496; nuclear winter 358–359; parties to NPT 19–20; political value 23–24; purpose 126; qualitative improvements 289; questionable expertise 403; Soviet programmes 290–291; Soviet strategic nuclear forces 294; strategic nuclear capability 299–300, 486; third generation of nuclear weapons 307–309; Third NPT Review Conference 13–19; threat to human rights 76; usability 2–3; US and Soviet nuclear lanunchers 297, 300; US and Soviet nuclear warheads 298, 300; US programmes 289–290; US strategic nuclear forces 293; world stockpiles 285, 295–298.

Outer space, see also *Stratagic Defense Initiative:* anti-satellite weapons 165–173, 334–335; arms control 471–472, 530–531; arms race 331–339; battlefield 29–39; militarization 29–34, 323–329; weapons 34–36.

Peace: crisis management 107–112; decision-making 107–108; feminist theory 95–99; historical perspective 97–98; male-dominated paradigm 96; Middle East crisis scenario 113–120; partnership model 98–99; peaceful and warlike societies 96–97; public opinion 223, 539–545; rethinking and reconceptualization 45, 537–538.

Peace movements: contribution of scientists 80–83; learning from 83–84; role of scientists 79–85.

Peace research: audiences 225–226; contribution by Bert Röling 101–104; inadequacy of military data 271–281; objective 217–218; rationale 225; research into the military sector 218–220; SIPRI studies 217–226.

Security: alternative approaches 141–148, 400–402; arms control 396; balance of power 397; common 395–408; conflict resolution 396; debate in FRG 141–142; deterrence 389, 396, 398, 400; idea of common security 395, 398–399; joint organization of 397–398; nature 424; political realism and idealism 395–396; rethinking and reconceptualization 45, 537–538; SDI and strategic stability 156–158; Soviet military doctrine 142–144; specific measures 424–425; Western European cooperation 175–183.

Star wars: see *Strategic Defense Initiative*

Strategic Defense Initiative: ABM Treaty 36–37, 129, 335; ASAT ban 165–173; arms control implications 328–329; arms race 38–39; destruction of space objects 152–156; implications 338–339, 343–344; NATO allies 326–327; nature 121, 124–126; offensive capabilities 151–158; origins 323–324; pairing offence with defence 38–39; research 36; SDI I and II 324–325; Soviet position 125–126, 326–327; space-based lasers 151–158; spin-off from SDI research 161–162; x-ray lasers 155–156.

Third World: armaments related debt 261–263; arms imports 248; arms production 47–58, 265–276; arms suppliers 248; intra-South arms transfers 48–50, 249–250, 253.

War, see also *military strategy* and *nuclear weapons:* causes 108–110; chaos in physical models 88–90; chemical and biological warfare 367–373; contemporary battlefield 347–365; crisis scenario 118–120; crisis stability 110; destructive potential 347–348; emerging technologies 352–353; environmental warfare 360–365; fatalities in recent wars 349; fear of 539–541; fog of crisis 113–114; frequency of major wars 347; influence of weaponry 350–352; Middle East scenario 113–120; miscalculation 41, 110; non-linear arms race model 90–92; nuclear winter 358–359; predictability 87–88; preemption 108–110; public opinion 539; risk 41; risk reduction 110–110, 121–130; waste of natural resources 348–349.
